

ABSTRACT

Disclosed is a method for measuring pressure in a container (1) filled or capable of being filled, using a pressure sensor(6) and a control unit (5). The filling or emptying is carried out under the control of the control unit (5) which receives as input signal, in addition to the pressure value (P_s) measured by the pressure sensor (6), a switching state (8) of a valve (4) controlled to fill or empty the container (1).
